Contents

The numbers below refer to pages in this PDF. Each paper retains its own printed pagination, complete proofs, appendices and references.

Introduction and reading map . . . 3

HAFF-A Physical Access and Correlation Geometry: The Holographic Alaya-Field Framework . . . 4

HAFF-B Coupling, Records, and Stable Relations: Formation, Protected Content and the Lifetime of a Geometry . . . 19

HAFF-C Causation, Agency, and Existence: Historical Control and Maintained Intervention . . . 33

HAFF-D Selection, Maintenance and Gravitational Response: Modular Constraints and a Physical Return . . . 47

HAFF-E Measurement as Accessibility: Measurement Permissions, Stable Records and Public Readout . . . 136

HAFF-F Records, Dissipation and Intervention: Conditions for a Temporal Direction . . 153

HAFF-G Internal Selection and Revisable Organization: How History Changes Permissions and Physical Sources . . . 170

HAFF-PS Postscript: Persistence, Participation and an Unfinished Self . . . 187

Introduction

Which relations constitute a world that an apparatus can read and sustain? The HAFF papers approach this question through channels, couplings, records and interventions. They distinguish a reconstructed description from a change in the matter that carries it. The gravitational proposal is therefore tested twice: through consistency of geometric data and through sources produced by the interactions that change access.

Read A and B together to establish the operational objects, then E for their measurement realization. C and F develop agency and temporal direction. D addresses the source and geometry interfaces; G returns those interfaces to revisable organization. The postscript discusses what persistence and participation mean for a finite system.

Reading map

HAFF-A *Physical Access and Correlation Geometry: The Holographic Alaya–Field Framework.* Physical channels and their record laws distinguish operational access from an abstract algebra. One initial preparation and fixed reconstruction rule can give non-isometric correlation geometries after different physical reductions.

HAFF-B *Coupling, Records, and Stable Relations: Formation, Protected Content and the Lifetime of a Geometry.* Couplings select what survives. Protected content, slowly decaying relations and physically acquired records have distinct roles in maintaining a description.

HAFF-C *Causation, Agency, and Existence: Historical Control and Maintained Intervention.* Agency is tested by interventions allowed by a retained history, including the maintenance needed for those interventions to remain available.

HAFF-D *Selection, Maintenance and Gravitational Response: Modular Constraints and a Physical Return.* Selection reaches gravitational response through an actual source. The paper joins finite physical returns to modular constraints and develops a common-action conjecture for the missing general mechanism.

HAFF-E *Measurement as Accessibility: Measurement Permissions, Stable Records and Public Readout.* An implementable measurement, a stable pointer and a public record need not coincide. Explicit permissions and instruments determine their connections.

HAFF-F *Records, Dissipation and Intervention: Conditions for a Temporal Direction.* A temporal direction requires an appropriate record and dissipation account. Causal order, entropy production and an agent's stored history are not interchangeable.

HAFF-G *Internal Selection and Revisable Organization: How History Changes Permissions and Physical Sources.* History can revise the operations a system selects. A target operation remains distinct from its larger executor; physical programming and source changes have costs.

HAFF-PS *Postscript: Persistence, Participation and an Unfinished Self.* Persistence and participation are interpreted through the finite constructions, without equating a useful self-model with a complete self-description.

The papers retain their complete proofs, appendices and references, and their own pagination. The contents list PDF page numbers; PDF bookmarks also provide section-level navigation.
